

Geological processes

Task 1

Find meanings of all these terms on the internet. Get ready to explain them in English.

Major external geological processes:

Driven by energy from the Sun and from gravity.

1. Hydrologic cycle
2. Weathering
3. Erosion
4. Deposition and soil formation
5. Glaciers, rivers and streams
6. Mass movements (landslides, rock falls)
7. Land-sea interactions (coastal erosion)

Major internal geological processes:

Driven by energy (heat) in the Earth's interior.

1. Convection and plate tectonics
2. Rock deformation
3. Crystallization
4. Metamorphism
